- Welcome!
- About this course
- Module 1 - Machine Learning
- **Module 2 - Regression**
  - **Learning Objectives**
  - **Intro to Regression (4:52)**
  - **Simple Linear Regression (12:50)**
  - **Lab: Simple Linear Regression**
  - **Multiple Linear Regression (13:39)**
  - **Model Evaluation (8:27)**
  - **Evaluation Metrics (3:06)**
  - **Non-Linear Regression (7:35)**
  - **Lab: Non-Linear Regression**
  - **Graded Review Questions** Review Questions
- Module 3 - Classification
- Module 4 - Clustering
- Module 5 - Recommender Systems
- Final Exam
- Certificates and

Instructions for Graded Review Questions

1. Time allowed: **Unlimited**
   - We encourage you to go back and review the materials to find the right answer
   - Please remember that the Review Questions are worth 50% of your final mark.
2. Attempts per question:
   - One attempt - For True/False questions
   - Two attempts - For any question other than True/False
3. Clicking the "**Final Check**" button when it appears, means your submission is **FINAL**. You will **NOT** be able to resubmit your answer for that question ever again
4. Check your grades in the course at any time by clicking on the "Progress" tab

REVIEW QUESTION 1 (1/1 point)

Train and Test on the Same Dataset might have a high training accuracy, but its out-of-sample accuracy can be low.

- (•) True ✔
- ( ) False

You have used 1 of 2 submissions

REVIEW QUESTION 2 (1/1 point)

Which of the following matrices can be used to show the results of model accuracy evaluation or the model's ability to correctly predict or separate the classes?

- (•) Confusion matrix ✔
- ( ) Evaluation matrix
- ( ) Accuracy matrix
- ( ) Error matrix

You have used 1 of 2 submissions

REVIEW QUESTION 3 (1/1 point)

When we should use Multiple Linear Regression?

- (•) When we would like to identify the strength of the effect that the independent variables have on a dependent variable. ✔
- ( ) When there are multiple dependent variables.

You have used 1 of 1 submissions
